- Richard Feldman [2, 3, 4] has been defending a principle whose slogan is: “evidence of evidence is evidence” (EEE).
- He uses the (EEE) principle to support a conciliationist position regarding the epistemology of peer disagreement.

... even if it is true that the theists and the atheists have private evidence, this does not get us out of the problem. Each may have his or her own special insight or sense of obviousness. But each knows about the other's insight. Each knows that this insight has evidential force. And now I see no basis for either of them justifying his own belief simply because the one insight happens to occur inside of him. **A point about evidence that plays a role here is this: evidence of evidence is evidence. More carefully, evidence that there is evidence for  $p$  is evidence for  $p$ . Knowing that the other has an insight provides each of them with evidence.**

- My aim today will be to take you through the recent dialectic concerning (EEE). The state-of-the-art on this dialectic is the recent *Noûs* paper by Tal & Comesaña [9].
- I'll be following their discussion (but skipping some details).

- I'll use T&C-style notation for expressing variants of (EEE).
  - $E$  evidentially supports  $p$  to degree  $\alpha \stackrel{\text{def}}{=} S(E, p, \alpha)$ .
    - $\alpha > 0$  is *support*;  $\alpha < 0$  is *counter-support*; and,  $\alpha = 0$  is *neutrality*.
  - $E$  is true  $\stackrel{\text{def}}{=} T(E)$ .
  - $S$  possesses evidence  $E \stackrel{\text{def}}{=} P(S, E)$ .
    - Following T&C, we'll assume that (all) evidence is *factive* — i.e., that  $P(S, E)$  and  $S(E, p, \alpha)$  each *entail*  $T(E)$ . This allows us to drop  $T(E)$  from evidential claims, for simplicity
  - When we make statements involving these three primitives, we'll assume that all implicit quantification is universal — i.e., we'll explicitly state only the existential quantifiers.
- Here are 2 simple examples, expressed in our T&C-language.
  - “There exists some evidence *for*  $p$ ”  $\mapsto (\exists E)(\exists_{\alpha > 0}) S(E, p, \alpha)$ .
  - “ $S$  possesses some evidence *against*  $p$ ” (*de dicto*)  
 $\mapsto (\exists E)(\exists_{\beta < 0}) [P(S, E) \& S(E, p, \beta)]$ .
- With our language in place, we're ready to examine (EEE).

- Initial renditions of (EEE) — as discussed by Feldman [4] and myself [5] — were both naïve and ambiguous. For instance:
 

(EEE) If  $E$  is evidence for the claim that  $S$  possesses some evidence for  $p$  then  $E$  is evidence for  $p$ .
- As T&C point out, this initial statement of (EEE) is ambiguous between a *de re* reading and a *de dicto* reading.
- First, the *de re* and *de dicto* readings of (EEE) in English.
 

(EEE)<sub>dr</sub> If (a)  $E$  is evidence for the claim that  $S$  possesses  $E'$ , and (b)  $E'$  is evidence for  $p$ , then  $E$  is evidence for  $p$ .

(EEE)<sub>dd</sub> If  $E$  is evidence for:  $\exists E'$  such that (a)  $S$  possesses  $E'$  and (b)  $E'$  is evidence for  $p$ , then  $E$  is evidence for  $p$ .
- In our T&C-style formalization, these renditions of (EEE) are:
 

(EEE)<sub>dr</sub>  $S(E, P(S, E'), \beta > 0) \& S(E', p, \alpha > 0) \Rightarrow (\exists_{\gamma > 0}) S(E, p, \gamma)$ .

(EEE)<sub>dd</sub>  $S(E, (\exists E')(\exists_{\alpha > 0}) [P(S, E') \& S(E', p, \alpha)], \beta > 0) \Rightarrow (\exists_{\gamma > 0}) S(E, p, \gamma)$ .

<ul style="list-style-type: none"> <li>Both of these naïve renditions of (EEE) are false. My proposed counterexample to (EEE) was as follows [5, 9].</li> </ul> <p><b>Card.</b> John (<i>S</i>) has observed a card that was drawn at random from a standard deck. Let <math>E \stackrel{\text{def}}{=} \text{the card is black}</math>, <math>E' \stackrel{\text{def}}{=} \text{the card is the ace of spades}</math>, and <math>p \stackrel{\text{def}}{=} \text{the card is an ace}</math>.</p> <ul style="list-style-type: none"> <li><math>E</math> is evidence for (<i>X</i>) John observed the ace of spades [<math>\Pr(X   E) = 1/26 &gt; 1/52 = \Pr(X)</math>], which <i>entails</i> <math>p</math>. But, <math>E</math> is (evidentially) <i>neutral</i> regarding <math>p</math> [<math>\Pr(p   E) = 1/13 = \Pr(p)</math>].</li> <li>So, <b>Card</b> is a counterexample to (EEE<sub>dr</sub>). Unfortunately, I did not distinguish (EEE<sub>dr</sub>) and (EEE<sub>dd</sub>). And, as T&amp;C point out, <b>Card</b> is <i>not</i> a counterexample to (EEE<sub>dd</sub>).</li> <li>☞ <math>E</math> is <i>not</i> evidence for the claim that John possesses <i>some</i> <math>p</math>-entailing evidence. That is, <math>E</math> is <i>not</i> evidence for (<i>X'</i>) John observed an ace.</li> <li>For <math>E</math> is <i>neutral</i> regarding <math>X'</math> [<math>\Pr(X'   E) = 1/13 = \Pr(X')</math>].</li> </ul>
